### Progress

How far along are you?

detected deprecated Pydantic v1 `class Config`, refactored it into Pydantic v2 `model\_config = ConfigDict` across multiple files, and submitted the PR).

We also built multi-language support (Python, JS, TS, JSX, TSX) and a GitHub App webhook daemon for CI/CD

How long have each of you been working on this? How much of that has been full-time? Please explain.

I have been working on this for the past 2 weeks as a solo technical founder, shipping from a raw concept to a published PyPI package with live GitHub automation and test suites  
I am 100% committed to working full-time on ApiPatch

What tech stack are you using, or planning to use, to build this product? Include AI models and AI coding tools you use.

Python, Node.js/TypeScript, OpenAI GPT-4o / Claude 4.5 Sonnet, Google antigravity IDE, GitHub Octokit API, aws services (DynamoDB and etc)

Are people using your product?

Yes

No

When will you have a version people can use?

A usable version is live right now on PyPI (pip install apipatch)  
Developers can run `apipatch scan`, `apipatch fix`, and `apipatch pr` on any local or remote repository. We are currently rolling out the hosted 1-click GitHub App.

Do you have revenue?

Yes

No
